

Sprint Review

- Heading: Sprint 1 Report, iHealthy(product name and team name), 10/20/2019
- Actions to stop doing: We should stop dividing html and css to different people, because it is easier if one person can handle both, and that person knows how to make user interface looks intuitive. Sometimes, it takes more time if we dividing html and css separately. If the work to be done is complementary, we should assign that task to one person. We should make the scrum meeting within 15 minutes because that will make the meeting more effective, and we can also use other time to talk about something else relating to the project.
- Actions to start doing: Have complementary work done by the same person, so other group members do not have to wait for another member to finish before able to work on their part.
- Actions keep doing: We should keep meeting three times per week, and make sure everyone is on the right track. The team members should also estimate their work, so all of us can complete the task by the deadline of each sprint. We should also keep helping each other understand how certain technologies are used and explain what each of the components does if someone is unfamiliar with it so we can all keep learning.
- Work completed/not completed:
 - Camera icon
 - Ask user permission to open camera
 - Put a search bar
 - Complete database
 - Get a domain name for the website
 - Complete the server
 - Front end developmentWe basically completed everything for sprint1.
- Work completion rate: There are 2 user stories, and the estimated ideal work hours is 20 hours. There are 9 days to complete sprint 1. Each group member spends at least 5 hours for the sprint 1 ideally. According to the team members, each member spends 3-4 hours on the sprint .

Day	Project Total Progre	Completed	Cumulative Completed
10/11/19	100	0	0
10/12/19	100	10	10
10/13/19	100	30	20
10/14/19	120	40	30
10/15/19	120	60	50
10/16/19	120	70	60
10/17/19	120	80	70
10/18/19	120	90	90
10/19/19	120	95	100
10/20/19	120	100	100
