Sprint4 Review

- Heading: Sprint4 Report, iHealthy(product name and team name), 12/1/2019

- Actions to stop doing: Not being able to make it to general meetings. Time that we have is limited and this hinders our progress with the project. Faster communication online since people are away for the holidays.

- Actions to start doing: Schedule maybe a time where we can talk online.

- Actions keep doing: Meetings with each other. We get more work and help done together than as individuals.

- Work completed/not completed:
  - We were able to finish our results page to display the proper results of the medicine searched by our users.
  - We also were able to get the Vision API file working so that a user can take a picture and use it to search for medicine.
  - We also were able to improve the user interface so that our product is more appealing.
  - We were not able to add a logout button so that the user can end their session.

- Work completion rate:
  - Throughout this sprint we were able to complete all of our planned user stories, although we did add the logout button and improvement of user interface by suggestion of our Teaching assistant. We did about 10 hours of ideal work time where we were getting our user stories done and adding functionality to the project. This ten hours was broken into four separate days where we met to work together and collaborate on what needed to be done.

Date	Project Total points	Completed	Cumulative Completed
11.18.2019	100	10	10
11.19.2019	100	15	10
11.20.2019	100	20	20
11.21.2019	100	30	30
11.22.2019	100	40	30
11.23.2019	100	45	40
11.24.2019	100	50	45
11.25.2019	100	50	50
11.26.2019	100	60	55
11.27.2019	100	70	60
11.28.2019	120	75	70
11.29.2019	120	85	80
11.30.2019	120	90	90
